

SPRAY FOAM INSULATION FOR PARK HOMES

Park homes are an ever-popular choice across the UK. Allowing people who have retired a new, comfortable and affordable place to live in - often in a dream location.

There are not many pitfalls to making this choice, except for the heating and maintenance bills.

The easiest way to combat this is to ensure that the home is fully insulated, especially the crawl space under the floor - an area that is often forgotten, yet contributes to a potential 50% heat loss!

Originally the sole reason to install insulation in a park home was to reduce heat loss through the inadequate insulated walls, but Synthesia UK spray foam insulation offers so much more. Here are some of the great benefits:

- Incredible thermal capabilities that reduce heat loss by at least 50%, saving you money
- It is completely maintenance free and will eliminate mould growth and condensation
- Improves the homes air quality and creates an even temperature throughout your home
- 25 year warranty to protect your financial investment
- Enhances the value of your property by reducing the EPC rating
- Drastically reduces noise intrusion like no other standard insulation on the market

PRE OPEN CELL INSTALL

POST OPEN CELL INSTALL

We recently reviewed an installation carried out in Camborne, Cornwall by Protec Insulation to determine just how well the Synthesia spray foam insulation performed. The customers review speaks for itself!

Synthesia spray foam insulation solutions don't just benefit you like traditional forms of insulation! By having it installed on your park home you will see payback in so many ways in a short space of time. For further information on Synthesia spray foam please visit our website here:

March 2019

"Prior to the company using Synthesia open cell spray foam insulation on the underside of the property, the home could not maintain good heat and had to be boosted by an oil filled radiator in the lounge. After the insulation was installed, we had to turn the heating down as it was immediately too hot. The home feels drier, the air cleaner and noise from outside is almost non-existent since it has been fitted. These are all additional benefits that makes this product such value for money. We are so pleased with the installation and although it does save money on heating, we love the additional unexpected benefits that come for free."

Roger Buss - March, 2019

This install was carried out by our leading team in the South West; Protec Insulation.
